

Using Bacteria to Produce the Spike Protein

(turning a bacteria into a spike factory then feeding it to humans)

When I was young, I saw horror films such as “Pit and the Pendulum” and “The Abominable Dr Phibes”.

I never imagined that government leaders would seek to emulate the same macabre methods. Schwab and co seem to be fans of Vincent Price...

The new bivalent vaccines have been found to contain circular DNA sequences called plasmids. These circular DNA sequences contain –

1. Replication competent code (DNA) for making the spike protein
2. 2 genes for conferring anti-biotic resistance

Ingestion of such plasmids will infect the bacterial colonies found in the digestive system of humans, turning these colonies into vast factories for the spike protein.

The infected person may try to find relief through taking anti-biotics, but the 2 genes will make the bacteria resistant to anti-biotics.

The only defense is to

1. Cook all food – so that any DNA or mRNA is destroyed by the temperature.
2. If food must be uncooked then only take food from known, local sources, where you can be sure of minimal government interference.
3. Always wash food to remove any surface residues (such as air-born sprays)
4. Always wash hands to avoid hand-to-mouth transfer of bacteria.
