

# THE CLINICAL TRIALS : notes

## 1. CLINICAL TRIAL DATA FOR YOUNG CHILDREN

[BOMBSHELL: Dr. Clare Craig Exposes How Pfizer Twisted Their Clinical Trial Data for Young Children \(rumble.com\)](#)

## 2. CLINICAL TRIAL OUTCOME FOR ELDERLY PARTICIPANT

65 yr old participant in Pfizer trial in placebo group

was injected with Moderna,

developed covid during the 2 week danger period, thanks to immunosuppression,

died

and was labelled an unvaccinated covid death!

Upon closer examination, subject #10841470 (as indicated in Line 14) had originally been part of the unvaccinated group, receiving Placebo doses 1 and 2 on September 30 and October 21, 2020, respectively. **However, a significant twist occurred on December 23, 2020, when this subject received Dose 1 of the Moderna mRNA vaccine.** The plot thickens as the story unfolds: on December 31, 2020, the subject was admitted to the hospital, where a turbulent medical journey ensued. Oxygen levels dropped significantly, leading to intubation on January 2, 2021. In a desperate bid for recovery, monoclonal antibodies were administered as part of the hospital's treatment regimen. Despite these Herculean efforts, the subject's health continued to deteriorate, eventually succumbing to multisystem organ failure on January 11, 2021.

**The subject's death was eventually classified as an "unvaccinated death" due to COVID-19!!**

14	10841470	M	65	11Jan2021	104	Multi-organ dysfunction <sup>†</sup> syndrome (COVID-19)
----	----------	---	----	-----------	-----	--

The Moderna Files have begun to be released.

Autopsies not done after unexpected deaths in trial.

High rates of Bells Palsy and Shingles.

FDA may regret their comment:

"The public can be assured that Spikevax meets the FDA's high standards for safety, effectiveness and manufacturing quality required of any vaccine approved for use in the United States,"
